## **GB Repair instructions**

Service and repair work must be performed only in accordance with the existing safety regulations!

Where a high current or a mechanical stress exists solder connections have been strengthened by using eyelets. Such a connection must not be left without an eyelet. Wiring has an effect on safety and EMC (Electro-Magnetic Compatibility). Therefore wires must be maintained in their original positions.

### **X-RAY REGULATIONS:**

The picture tube type and the maximum permissible high-voltage ensure that the X-ray intensity of the receiver remains far below the permissible value. The high-voltage must not exceed the value mentioned on the type label. The high voltage is within the permissible limits when the operating voltage (U1) of the horizontal deflection stage is accurate. Refer to the section "Service adjustments".

### **ESD Warning**

The receiver contains components that are sensitive to electrostatic discharge (ESD). Any servicing or repair work must be done in an environment where the components will not be subjected to ESD. Use a special grounding device!

### **Surface-Mounted Device (SMD)**

SMD's are glued and soldered. In order not to damage the P.C.B e.g. when replacing ICs and similar components with many soldering points, special tools are required when servicing SMD's.

### **Changes**

The manufacturer reserves the right to change the design and specification without prior notice.

## **D Reparatur-Anweisung**

Service- und Reparaturarbeiten dürfen nur in Übereinstimmung mit den gültigen Sicherheitsbestimmungen durchgeführt werden!

Bei bestehendem hohen Stromwerten oder mechanischer Beanspruchung müssen Lötverbindungen durch Ösen verstärkt werden. Eine derartige Verbindung darf nicht ohne Öse ausgeführt werden.

Die Verdrahtung hat Einfluß auf die Sicherheit und die elektromagnetische Verträglichkeit. Daher muß die ursprüngliche Anordnung der Verdrahtung erhalten bleiben.

### **RÖNTGENVERORDNUNG**

Der Bildröhrentyp und die maximal zulässige Hochspannung stellen sicher, daß die Intensität der Röntgenstrahlen des Fernsehgerätes weit unter dem zulässigen Wert bleibt. Die Hochspannung darf nicht den auf dem Typenschild befindlichen Wert überschreiten. Die Hochspannung liegt im zulässigen Bereich, wenn die Betriebsspannung (U1) der Horizontal-Ablenkstufe genau eingehalten wird. Siehe auch Abschnitt "Service-Einstellungen".

### **EGB-Warnung**

Das Fernsehgerät enthält Bauteile, die empfindlich auf elektrostatische Entladung reagieren. Alle Service- oder Reparaturarbeiten sind in einer Umgebung durchzuführen, in der die Bauteile nicht elektrostatischer Entladung ausgesetzt sind. Verwenden Sie eine spezielle Erdungsvorrichtung!

### **SMD-Bauelement**

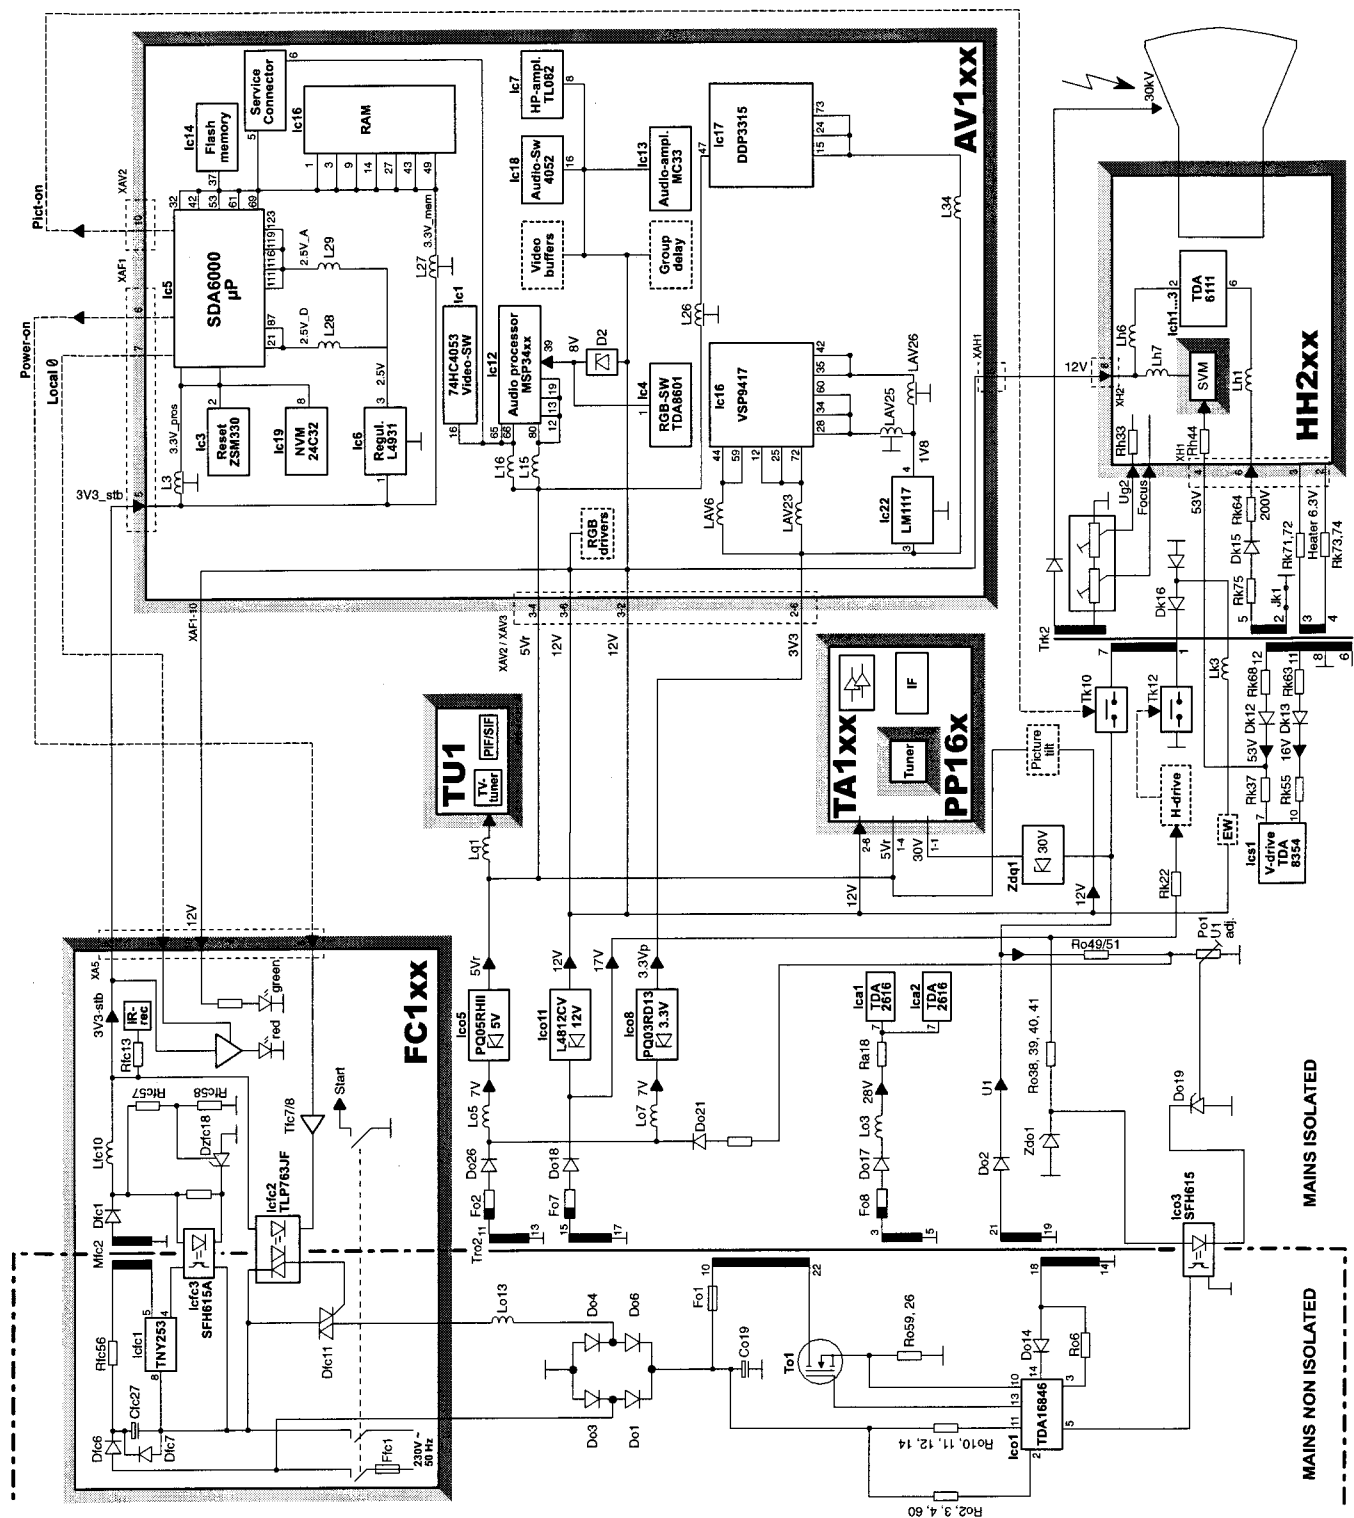

Die SMD's sind geklebt und verlötet. Es sind spezielle Werkzeuge erforderlich, damit bei Austausch von ICs und ähnlichen Bauteilen mit vielen Lötunkten die Leiterplatte nicht beschädigt wird.

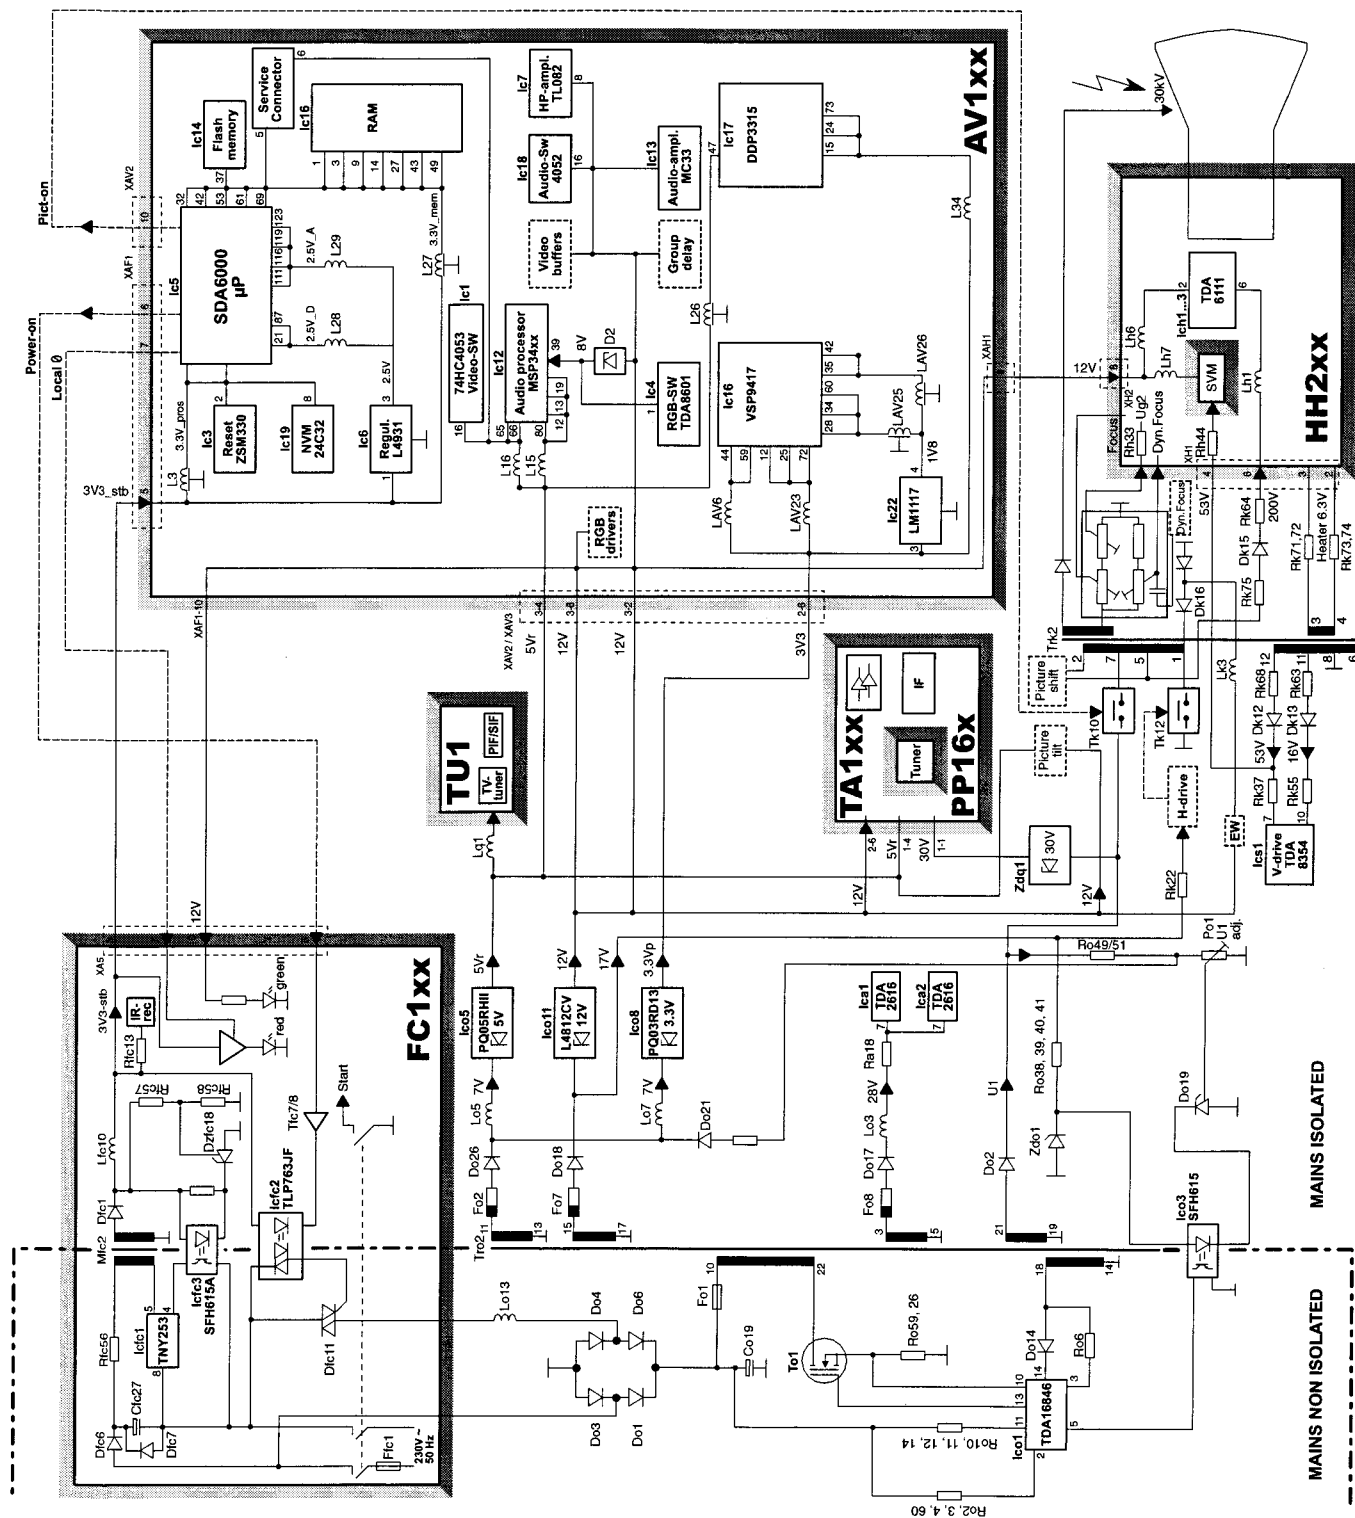

### **Änderungen**

Der Hersteller behält sich das Recht vor, Änderungen in Bauart und Ausführung ohne vorherige Ankündigung durchzuführen.

## Operating instructions

### Changing the menu language

1. Press the menu button to select the main menu.
2. Select "Settings" with the arrow buttons (left/right) and press the arrow button down.
3. Select "Language" with the arrow buttons (up/down) and change the menu language with the arrow buttons (left/right).
4. Press the TV button to exit.

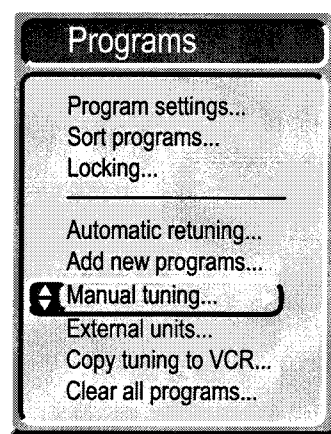

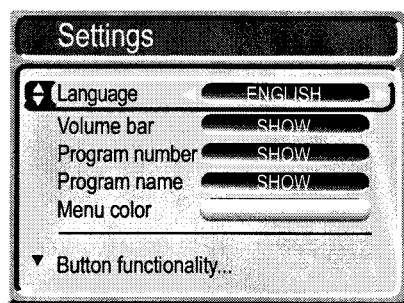

### Manual tuning

1. Select the programme number you want to tune.
2. Press the MENU button.
3. Select "Programs" with the arrow buttons (left/right) and press the arrow button down.
4. Select "Manual tuning" with the arrow buttons (up/down) and press the arrow button right.
5. Press the arrow button right and select "Channel search" with the arrow buttons (up/down).
6. Press the arrow button right to start channel search.
7. Press the TV button and then the arrow button right to confirm.

8. Press the OK button to store
9. Press the TV button to exit.

### APSi (Automatic Programming System)

1. Press the MENU button.
2. Select "Programs" with the arrow buttons (left/right) and press the arrow button down.
3. Select "Automatic retuning" with the arrow buttons (up/down) and press the arrow button right.
4. To retune the channels, press the arrow button right and then the OK button.
5. Press the TV button to exit.

## Service adjustments

### Service mode activation

The receiver must be switched on or be in stand-by mode when activating the service mode.

1. Keep the **▲**- (volume minus) button on **local control unit** pressed and at the same time start entering password: First MENU, TV and "i" with the **remote control**. Release the **▲**- button after the TV button has been pressed. If the receiver is in stand-by mode after the password was entered, switch on the receiver by pressing the TV button.
2. Activate the service mode by pressing the i button.

The following adjustment menu appears on the screen:

The adjustment number and name, initializing value (down) and adjustment value (up) are shown in the menu.

3. Exit the service mode by pressing the TV button or logout by switching off the receiver with the mains switch.

*Note! Service mode activation stays enabled until the receiver is switched off with the mains switch.*

### Initialization of NVRAM

In case that the NVRAM is replaced, it must be initialized and configured.

1. Activate the service mode in stand-by mode as described in "Service mode activation".
2. Initialize the NVRAM by entering the key code: BLUE, 2, 5, 4 and OK. Initializing will take about 20 s. The receiver switches on automatically when the initializing is ready.
3. Activate the service mode by pressing the i button.
4. Press the GREEN button to configure the receiver, see also chapter "Configuration and fault diagnostics". (check that the automatic configuration results in IIC DEV 1-3 and IF OPT bytes are corresponding to the actual configuration of the receiver).
5. Set manual option bytes (TXT OPT, SYS OPT 1 and 2) to correspond to the actual configuration of the receiver. Press the OK button to store the settings.
6. Switch off the receiver by pressing the mains switch.
7. Switch on the receiver by pressing the mains switch and tune one or more tv channels.
8. Activate the service mode and make the necessary service adjustments.
9. Switch off the receiver by pressing the mains switch.

## Service adjustments

### Configuration and fault diagnosis

The receiver must be configured after adding or removing any options. By pressing the GREEN button in service mode, the processor checks the configuration of the receiver and shows the settings on the screen. The configuration can be stored by pressing the OK button.

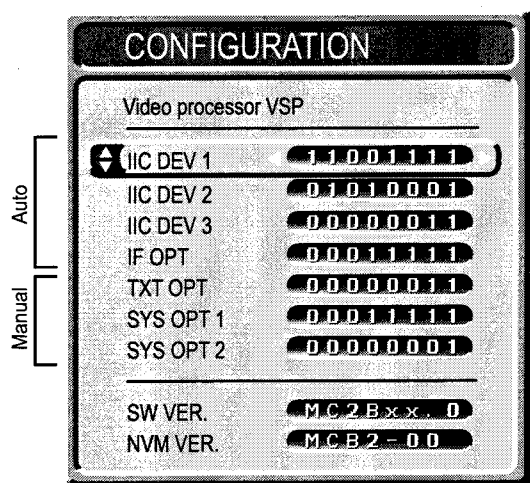

*Note! Disconnect Scart 3 and RCA (line out) cables before configuring the receiver.*

This feature can also be used in fault diagnosis. If an option bit is not '1' when it should be, the IC (or feature) is either not present or faulty.

*Note! IIC DEV 1-3 and IF OPT bytes are configured automatically every time the GREEN button is pressed. TXT OPT, SYS OPT 1 and 2 bytes must be set manually.*

### Changing the option bytes

1. Select the configuration mode by pressing the GREEN button in the service mode.

SW VER. =  $\mu$ P software version.

NVM VER. = NVRAM software version.

2. Select IIC Device byte 1 - 4, Option byte 1 - 5 or Uif flags byte with the arrow buttons (up/down).
3. The name of a responding bit can be seen when using the arrow buttons (up/down and left/right). The selected bit is shown highlighted.
4. Set / clear the bits with the number buttons (0 ... 7).
5. Store the settings by pressing the OK button.
6. Return to the normal service mode by pressing the GREEN button.

### Option byte description

Bit	Description	Setting	'1'	'0'
7 6 5 4 3 2 1 0				
<b>IIC DEV 1</b>		<b>11001111</b>		
0	Video processor VSP		Yes	No
1	Deflection processor DPP		Yes	No
2	TV Tuner PLL		Yes	No
3	TV Tuner IF		Yes	No
4	PIP Tuner PLL		Yes	No
5	PIP Tuner IF		Yes	No

1	Autostart, Special monitor use		Yes	No
2...6	Free		Yes	No
7	Limited volume		Yes	No

## Service adjustments via I<sup>2</sup>C-bus

### Remote control buttons in service mode

When the receiver is in the service mode you can select the normal TV mode by pressing the TV button and return to the service mode by pressing the i button. The number and the arrow buttons are used for service adjustments. The OK button stores the settings.

### Adjustments for different picture formats

Make all adjustments with a PAL signal unless otherwise mentioned. Make 4:3 set adjustments with normal 4:3 (classic) picture format and 16:9 set adjustments with wide (16:9) picture format. Then make the necessary adjustments with other picture formats/signals. The required adjustments are shown in the table below.

*Note! Check the configuration of the receiver before making the adjustments and make only the necessary adjustments.*

### Making the service adjustment

1. Give a two digit code which determines an adjustment (e.g. 04 = width, see the following tables) with the number buttons or select an adjustment stepping with the arrow buttons (up/down).

*Note! Power supply and Ug2 adjustments must be done before picture geometry adjustments.*

2. Adjust with the cursor buttons (left/right).

3. Store the new value by pressing the OK button.

#### Note!

- To avoid incomplete adjustments store each adjustment in the memory immediately after an adjustment has been made.
- If an adjustment has to be made separately for different picture format/signal, select first the normal TV mode by pressing the TV button and select then the desired picture format/signal. Return to service mode by pressing the i button.

### Making the picture geometry adjustments

To help the adjustment of geometry with living picture a red border appears around the deflection area of the picture. It can be switched ON/OFF with the RET-button.

### Picture geometry adjustments

Adjustment	Code	OSD name	4:3 classic/16:9 wide	Progressive scan 50 Hz	VGA 60Hz	VGA 70Hz	Note!
Vertical amplitude	00	V-AMPL.	X	X	X	X	<p>Adjust deflection to center of screen (only in VGA sets).</p> <p>First find the adjustment values where the blanking begins to come over the red area (left/right) and then adjust blanking to the middle of these adjustment values.</p>
Vertical off-centre shift	01	V-SHIFT	X	X	X	X	
Linearity	02	LINEARITY	X	X		X	
Vertical S-correction	03	S-CORR.	X	X		X	
Width	04	WIDTH	X	X	X	X	
Horizontal shift deflection	05	H-SHIFT	X				
Horizontal phase video	06	PHASE	X				
Horizontal blanking	07	HOR BLANK	X				
Parabola	08	PARABOLA	X	X	X	X	
Upper corners	09	CORNER UP	X	X	X	X	
2nd upper corners	10	CORN 2 UP	X	X			
Lower corners	11	CORNER LO	X	X	X	X	
2nd lower corners	12	CORN 2 LO	X	X			
Bow	13	BOW	X	X		X	
Trapezium	14	TRAPEZIUM	X	X		X	
Parallelogram distortion	15	ANGLE	X	X		X	

VGA 60 Hz = Windows mode

VGA 70 Hz = DOS mode

### Other adjustments

Adjustment	Code	OSD name	Note!
Screen grid voltage	16	G2	Adjust the Ug2 until the display shows $140 \pm 20$ .  <i>Note! Don't press the OK button if only Ug2 adjustment is needed.</i>  If the colour temperature adjustment is needed, start it here by pressing the OK button. This restores the default value of codes 14...19 and locks the reference value (20...22) of the highest gun.
Red gain	17	R GAIN	This procedure is necessary e.g. when the picture tube, CRT-module etc. has been replaced. First adjust the GAIN values (white area to 80 nit) and then REF values (dark area to 1.5 nit). Check then GAIN values again and adjust them again if needed. Adjusting: Pressing the RET button changes gray-picture / external-picture and pressing the RED (down) and the YELLOW (up) button changes the contrast value.
Green gain	18	G GAIN	
Blue gain	19	B GAIN	
Red reference	20	R REF.	
Green reference	21	G REF.	
Blue reference	22	B REF.	
Subcarrier adjust	23	SUB-CARRIER	Start adjustment by pressing right arrow button. Press the OK button to store the value (must be between 29...35).
High voltage limitation	24	EHT PROT	Adjust the value upwards until the TV picture becomes blanked. At the same time the value will be decreased automatically with 60 steps. After that press the OK button to store the adjustment.

### Variable adjustments

Adjustment	Code	OSD name	Note!
BCL (beam current limitation) threshold	25	BCL THRES	Picture tube related default values are given in separate info (CRT dependant adjustments).
BCL gain	26	BCL GAIN	
Threshold for H/V-amplitude EHT corr.	27	EHT THRES	
EHT compensation for H-amplitude	28	EHTH1	
EHT compensation for V-amplitude	29	EHTV1	
H-compensation with higher beam currents	30	EHTH2	
V-compensation with higher beam currents	31	EHTV2	

## Service adjustments

### O Power supply block

#### Supply voltage and protection circuit

1. Set the brightness and the contrast to the normal level. Connect a universal voltmeter to the cathode of Do2.
2. Adjust the **U1 voltage** with **Po1**. The voltage depends on the picture tube type, refer to the section "Variable components".

#### Safety features

Activation of the service mode disables the following features:

- Horizontal safety function (EHT)
- Start-up checking: Video processor and Deflection processor fail to initialize correctly.

### K Horizontal deflection block

#### Horizontal linearity

Adjust with **Lk1**.

#### Focusing

Set the brightness and the contrast to the normal level. Use the crosshatch pattern and adjust the picture for optimum resolution.

#### (Screen grid voltage) Ug2 voltage

Ug2 voltage can easily be adjusted with help of the on screen display, see section "other adjustments" / screen grid voltage.

#### Ug2 adjusting with oscilloscope:

1. Set the brightness and the colour saturation to the normal level and the contrast to minimum.
2. At the end of the vertical blanking, there is a black current measurement pulse (clamp pulse) at **pin 9** of **Ich1**, **Ich2** and **Ich3**. Use an oscilloscope and find the output stage with the highest cut-off (i.e. the highest voltage during the black current measurement pulse).
3. Adjust the voltage of the clamp pulse to **+140 V** with Ug2 (see figure).

*Note! Adjust the voltage with a clamp pulse.*

#### To reset the remote control

1. Remove batteries
2. Reset the remote control by pressing the **BLUE** button approx. 10 seconds and then mount the batteries.

## Bedienungsanleitung

### Ändern der Menüsprache

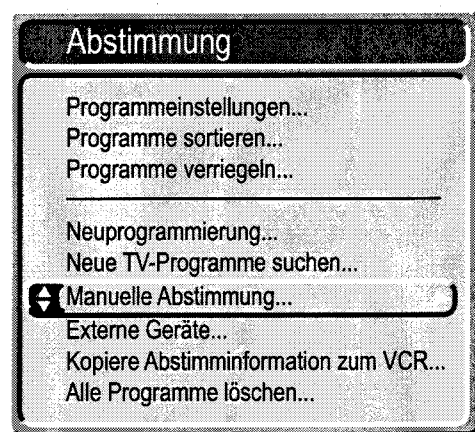

1. Drücken Sie zur Wahl des Hauptmenüs die Menütaaste.
2. Wählen Sie "Einstellungen" mit den Pfeiltasten (links/rechts) und drücken Sie die abwärtszeigende Pfeiltaste.
3. Wählen Sie "Sprache" mit den Pfeiltasten (aufwärts/abwärts) und ändern Sie die Menüsprache mit den Pfeiltasten (links/rechts).
4. Beenden Sie den Vorgang durch Drücken der Taste TV.

### Manuelle Abstimmung

1. Wählen Sie die Programmnummer, die Sie abstimmen möchten.
2. Drücken Sie die Taste MENU.
3. Wählen Sie "Programme" mit den Pfeiltasten (links/rechts) und drücken Sie die abwärtszeigende Pfeiltaste.
4. Wählen Sie "Manuelle Abstimmung" mit den Pfeiltasten (aufwärts/abwärts) und drücken Sie die rechte Pfeiltaste.
5. Drücken Sie die rechte Pfeiltaste und wählen Sie "Kanalsuche" mit den Pfeiltasten (aufwärts/abwärts).
6. Drücken Sie die rechte Pfeiltaste, um die Kanalsuche zu starten.
7. Drücken Sie zur Bestätigung die Taste TV und dann die rechte Pfeiltaste.
8. Drücken Sie zur Speicherung die Taste OK.
9. Beenden Sie den Vorgang durch Drücken der Taste TV.

### APSi (Automatisches Programmiersystem)

1. Drücken Sie die Taste MENU.
2. Wählen Sie "Programme" mit den Pfeiltasten (links/rechts) und drücken Sie die abwärtszeigende Pfeiltaste.
3. Wählen Sie "Automatische Neuabstimmung" mit den Pfeiltasten (aufwärts/abwärts) und drücken Sie die rechte Pfeiltaste.
4. Drücken Sie zur Neuabstimmung der Kanäle die rechte Pfeiltaste und dann die Taste OK.
5. Beenden Sie den Vorgang durch Drücken der Taste TV.

## Service-Einstellungen

### Aktivierung des Servicemodus

Das Fernsehgerät muss bei der Aktivierung des Servicemodus eingeschaltet oder im Stand-by-Modus sein.

1. Halten Sie die Taste- (Lautstärke verringern) an den **Bedienelementen am Fernsehgerät** gedrückt und drücken Sie gleichzeitig mit der **Fernbedienung** nacheinander die Tasten MENU, TV und i. Lassen Sie die Taste- nach dem Drücken der Taste TV los. Falls das Fernsehgerät nach Eingabe dieses Codes im Stand-by-Modus ist, schalten es durch Drücken der Taste TV ein.
2. Aktivieren Sie den Servicemodus durch Drücken der Taste-i. Das folgende Einstellmenü erscheint auf dem Bildschirm:

Einstellzahl und -Name, der Initialwert (abwärts) und der Einstellwert (aufwärts) werden im Menü gezeigt.

3. Beenden Sie den Servicemodus durch Drücken der Taste TV oder loggen Sie sich durch Ausschalten des Fernsehgerätes mit dem Netzschalter aus.

*Hinweis: Der Servicemodus bleibt aktiviert, bis das Fernsehgerät mit dem Netzschalter ausgeschaltet wird.*

### Initialisierung des NVRAM

Falls der NVRAM ausgetauscht worden ist, muß dieser initialisiert und konfiguriert werden.

1. Aktivieren Sie im Stand-by-Modus den Servicemodus wie unter "Aktivierung des Servicemodus" beschrieben.
2. Initialisieren Sie den NVRAM durch Eingabe des Tastencodes: Blaue Taste, 2, 5, 4 und OK. Die Initialisierung dauert etwa 20 Sekunden. Das Fernsehgerät schaltet sich automatisch ein, wenn die Initialisierung vollzogen ist.
3. Aktivieren Sie den Servicemodus durch Drücken der Taste-i.
4. Drücken Sie die grüne Taste zur Konfiguration des Fernsehgerätes; siehe auch Kapitel "Konfiguration und Fehlerdiagnose". (Stellen Sie sicher, daß die automatische Konfiguration IIC DEV 1-3 ergibt und die IF OPT-Bytes der aktuellen Konfiguration des Fernsehgerätes entsprechen.)

## Service-Einstellungen

- Stellen Sie die manuellen Optionsbytes (TEXT OPT, SYS OPT 1 und 2) auf die aktuelle Konfiguration des Fernsehgerätes ein. Drücken Sie zur Speichern der Einstellungen die Taste OK.
- Schalten Sie das Fernsehgerät mit dem Netzschalter aus.
- Schalten Sie das Fernsehgerät mit dem Netzschalter ein und stimmen Sie einen oder mehrere Fernsehkanäle ab.
- Aktivieren Sie den Servicemodus und nehmen Sie die nötigen Serviceeinstellungen vor.
- Schalten Sie das Fernsehgerät mit dem Netzschalter aus.

### Konfiguration und Fehlerdiagnose

Das Fernsehgerät muß nach Hinzufügen oder Wegnahme von Optionen konfiguriert werden. Bei Drücken der grünen Taste im Servicemodus überprüft der Prozessor die Konfiguration des Fernsehgerätes und zeigt die Einstellungen auf dem Bildschirm. Die Konfiguration kann durch Drücken der Taste-OK gespeichert werden.

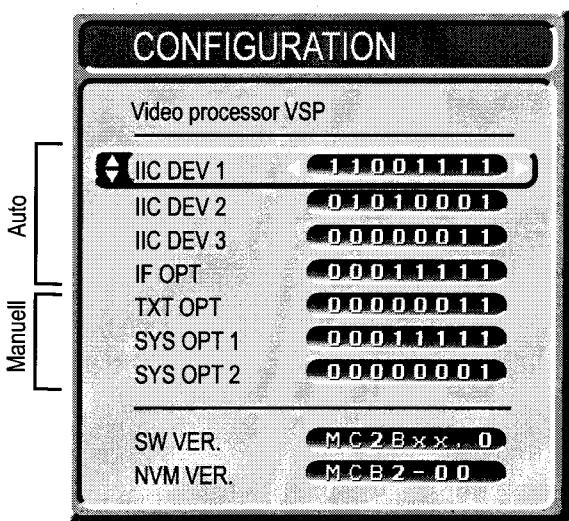

*Hinweis! Entfernen Sie vor der Konfiguration des Fernsehgerätes die Scart 3- und RCA-Ausgangskabel.*

Dieses Feature kann auch bei der Fehlerdiagnose verwendet werden. Falls ein Optionsbit nicht wie erwartet '1' sein sollte, ist der IC oder das Feature entweder nicht vorhanden oder fehlerhaft.

*Hinweis: Die Bytes IIC DEV 1 - 3 und IF OPT werden immer bei Drücken der grünen Taste automatisch konfiguriert. Die Bytes TXT OPT sowie SYS OPT 1 und 2 müssen manuell eingestellt werden.*

### Ändern der Optionsbytes

- Wählen Sie den Konfigurationsmodus durch Drücken der grünen Taste im Servicemodus.

SW VER. = Softwareversion µP.

NVM VER. = Softwareversion NVRAM.

- Wählen Sie den IIC Gerätebyte 1 - 4, den Optionsbyte 1 - 5 oder den UIF-Zustandsbyte mit den Pfeiltasten (auf-/abwärts).
- Der Name eines entsprechenden Bits wird bei Drücken der Pfeiltasten (auf-/abwärts und links/rechts) sichtbar. Das gewählte Bit erscheint hervorgehoben.
- Stellen bzw. löschen Sie die Bits mit den Zifferntasten (0 ... 7).
- Speichern Sie die Einstellungen durch Drücken der Taste-OK.
- Kehren Sie durch Drücken der grünen Taste in den normalen Servicemodus zurück.

### Beschreibung der Optionsbytes

Bit	Beschreibung	Einstellung 7 6 5 4 3 2 1 0	'1'	'0'
<b>IIC DEV 1</b>

## Service-Einstellungen über den I2C-Bus

### Tasten der Fernbedienung im Servicemodus

Wenn sich das Fernsehgerät im Servicemodus befindet, kann ein normales Fernsehprogramm durch Drücken der Taste TV gewählt werden. Durch Drücken der Taste i gelangen Sie wieder in den Servicemodus. Die Ziffern- und die Pfeiltasten werden für Serviceeinstellungen verwendet. Die Taste-OK speichert die Einstellungen.

### Einstellungen für verschiedene Bildformate

Wenn nicht anders beschrieben, führen Sie sämtliche Einstellungen mit einem PAL-Signal durch. Die Einstellungen für Geräte im 4:3-Format werden im normalen (klassischen) Bildformat 4:3 und die für Geräte im 16:9-Format im breiteren Bildformat 16:9 vorgenommen. Führen Sie dann die nötigen anderen Bildformat- und Signaleinstellungen durch. Die nötigen Einstellungen werden in der Tabelle unten gezeigt.

*Hinweis:* Überprüfen Sie vor Durchführung der Einstellungen die Konfiguration des Fernsehgerätes und führen Sie nur die nötigen Einstellungen durch.

### Durchführen der Serviceeinstellung

1. Geben Sie mit den Ziffertasten einen zweistelligen Code ein, der eine Einstellung festlegt (z.B. 04 = Weite, siehe folgende Tabellen) oder wählen Sie eine Einstellung mit den Pfeiltasten (aufwärts/abwärts).

*Hinweis:* Einstellungen am Netzteil und für UG2 müssen vor den Einstellungen der Bildgeometrie durchgeführt werden.

- Nehmen Sie die Einstellung mit den Cursortasten (links/rechts) vor.
- Speichern Sie den neuen Wert durch Drücken der Taste OK.

#### Hinweis!

- Um unvollständige Einstellungen zu vermeiden, speichern Sie sofort jede Einstellung nachdem diese durchgeführt wurde.
- Wenn eine Einstellung getrennt für verschiedene Bildformate und -Signale durchgeführt werden muß, wählen Sie erst durch Drücken der Taste TV den normalen Fernsehmodus und wählen dann das gewünschte Bildformat und -Signal. Gehen Sie durch Drücken der Taste i in den Servicemodus zurück.

### Einstellungen der Bildgeometrie

Um die Einstellung der Bildgeometrie bei laufendem Fernsehbild zu erleichtern, erscheint an der Ablenkfläche des Bildes ein roter Rand, der mit der Taste RET ein- und ausgeblendet werden kann.

### Einstellungen der Bildgeometrie

Einstellung	Code	Name im Display	4:3 klassisch / 16:9 weit	Schrittweises Abtasten 50 Hz	VGA 60 Hz	VGA 70 Hz	Hinweis!
Vertikale Amplitude	00	V-AMPL.	X	X	X	X	
Vertikale Außermittenverchiebung	01	V-SHIFT	X	X	X	X	
Linearität	02	LINEARITY	X	X		X	
Vertikale S-Korrektur	03	S-CORR.	X	X		X	
Weite	04	WIDTH	X	X	X	X	
Horizontale Ablenkungsverschiebung	05	H-SHIFT	X				Stellen Sie die Ablenkung auf die Bildschirmmitte ein (nur bei VGA-Geräten).
Horizontalphase Video	06	PHASE	X				
Horizontale Austastung	07	HOR BLANK	X				Finden Sie zuerst die Einstellwerte, bei denen die Austastung über die rote Fläche zu treten beginnt (links/rechts) und stellen Sie dann die Austastung auf den Mittelwert dieser Einstellwerte ein.
Parabol	08	PARABOLA	X	X	X	X	
Obere Ecken	09	CORNER UP	X	X	X	X	
Zweite obere Ecken	10	CORN 2 UP	X	X			
Untere Ecken	11	CORNER LO	X	X	X	X	
Zweite untere Ecken	12	CORN 2 LO	X	X			
Bogen	13	BOW	X	X		X	
Trapez	14	TRAPEZIUM	X	X		X	
Parallelogramm-Verzerrung	15	ANGLE	X	X		X	VGA 60 Hz = Windows-Modus VGA 70 Hz = DOS-Modus

**Andere Einstellungen**

Einstellung	Code	Name im Display	Hinweis!
Schirmgitterspannung	16	G2	Stellen Sie Ug2 ein, bis das das Display einen Wert von $140 \pm 20$ zeigt.  <i>Hinweis: Drücken Sie nicht die OK-Taste, wenn nur die Einstellung von Ug2 erforderlich ist.</i>  Ist die Einstellung der Farbtemperatur nötig, beginnen Sie durch Drücken der Taste OK. Dieses stellt die Ursprungswerte der Codes 14...19 wieder her und sperrt den Referenzwert (20...22) der höchsten Elektronenkanone.
Rotverstärkung	17	R GAIN	Dieser Vorgang ist nötig, wenn z.B. die Bildröhre oder das CRT-Modul ausgetauscht worden sind. Stellen Sie zuerst die Verstärkungswerte (weiße Fläche auf 80 nit) und dann die Referenzwerte ein (dunkle Fläche auf 1.5 nit). Überprüfen Sie dann nochmals die Verstärkungswerte und stellen Sie diese - wenn nötig - erneut ein. Einstellung: Drücken der Taste RET verändert das Graustufenbild/ externes Bild und Drücken der roten (abwärts) und der gelben Taste (aufwärts) verändert den Kontrastwert.
Grünverstärkung	18	G GAIN	
Blauverstärkung	19	B GAIN	
Rotreferenz	20	R REF.	
Grünreferenz	21	G REF.	
Blaureferenz	22	B REF.	
Einstellung des Hilfsträgers	23	SUB-CARRIER	Starten Sie die Einstellung durch Drücken der rechten Pfeiltaste. Drücken Sie die Taste OK zur Speicherung des Wertes (er soll zwischen 29 und 35 liegen).
Hochspannungsbegrenzung	24	EHT PROT	Stellen Sie den Wert so hoch ein, bis das Fernsehbild ausgetastet wird. Gleichzeitig wird der Wert automatisch in 60 Stufen verringert. Drücken Sie anschließend zur Speicherung der Einstellung die Taste OK.

**Variable Einstellungen**

Einstellung	Code	Name im Display	Hinweis!
Schwellenwert für Strahlstrombegrenzung	25	BCL THRES	Für Standardwerte der Bildröhre siehe separate Hinweise (CRT dependant adjustments)
Verstärkung für Strahlstrombegrenzung	26	BCL GAIN	
Schwellenwert für H/V-Amplitude (EHT-Korrektur)	27	EHT THRES	
EHT-Kompensation für Horizontalamplitude	28	EHTH1	
EHT-Kompensation für Vertikalamplitude	29	EHTV1	
H-Kompensation bei höheren Strahlströmen	30	EHTH2	
V-Kompensation bei höheren Strahlströmen	31	EHTV2	

## Service-Einstellungen

### O Netzteil

#### Versorgungsspannung und Schutzschaltung

1. Stellen Sie die Helligkeit und den Kontrast auf einen normalen Wert ein. Schließen Sie ein Universal-Voltmeter an der Kathode von **Do2** an.
2. Stellen Sie die **Spannung U1** mit **Po1** ein. Die Spannung hängt vom Typ der Bilfröhre ab, siehe auch Abschnitt "Variable Bauteile".

#### Sicherheitsfeatures

Die Aktivierung des Servicemodus setzt folgende Features außer Kraft:

- Horizontale Sicherheitsfunktion (EHT)
- Überprüfung bei Beginn:  
Videoprozessor und Ablenkungsprozessor können nicht korrekt initialisieren.

### O Horizontal-Ablenkeinheit

#### Horizontale Linearität

Mit **Lk1** einstellen.

#### Fokussierung

Stellen Sie Helligkeit und Kontrast auf den normalen Wert ein. Benutzen Sie ein Kreuzschraffurmuster und stellen Sie das Bild auf die optimale Auflösung ein.

#### (Schirmgitterspannung) Spannung Ug2

Die Spannung Ug2 kann leicht mit Hilfe des Bildschirmanzeige eingestellt werden, siehe Abschnitt "Andere Einstellungen" / Schirmgitterspannung.

#### Einstellung von Ug2 mit dem Oszilloskop

1. Stellen Sie Helligkeit und Farbsättigung auf den normalen Wert und den Kontrast auf den kleinsten Wert ein.
2. Am Ende des vertikalen Austastens ist ein Schwarzstrom-Meßimpuls (Klemmimpuls) an **Pin 9** von **Ich1**, **Ich2** und **Ich3**. Verwenden Sie ein Oszilloskop und ermitteln Sie die Ausgangsstufe mit der höchsten Grenzspannung (entspricht der höchsten Spannung während des Schwarzstrom-Meßimpulses).
3. Stellen Sie die Spannung des Klemmimpulses mit **UG2** auf **+140 V** ein (siehe Abbildung).

*Hinweis: Stellen Sie die Spannung mit einem Klemmimpuls ein.*

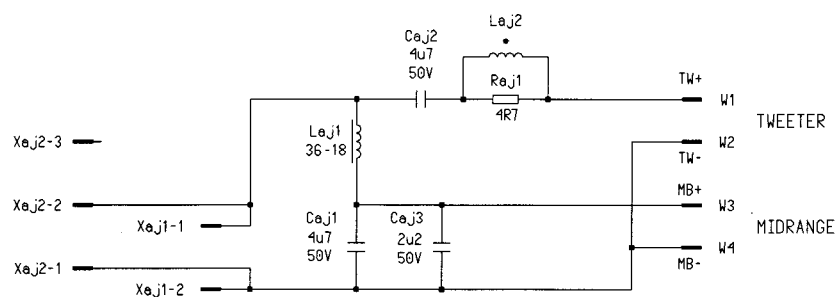

#### Zurücksetzen der Fernbedienung

1. Entnehmen Sie die Batterien.
2. Setzen Sie die Fernbedienung zurück, indem Sie die blaue Taste etwa 10 Sekunden lang drücken. Setzen Sie dann die Batterien wieder ein.
